SUBJECT: Lifting Equipment Meeting Minutes

A meeting to discuss lifting equipment issues was held on February 18, 1994. The following items were discussed:

1. NSS/GO-1740.9 status
2. ERR 127-1 lifting equipment requirements
3. CCAFS industrial area crane problems
4. World Class Crane Committee
5. VAB 250 crane close call - August 1992
6. Department of Energy Hoisting and Rigging Committee
7. VAB platform hoist overloads
8. RM-POL KSC lifting equipment audit
9. Stennis Space Center prototype database for lifting equipment
10. VAB 325 ton crane status
11. Upgraded LETF load test capability
12. Personnel riding facility doors

Regarding the RM-POL lifting equipment audit, comments were solicited at the meeting about reducing annual load testing. It was suggested load testing of some SPC rigging equipment might be reduced.

After the meeting, Jon Angell(7-1684) mentioned MDSS is using nondestructive electromagnetic wire rope inspection equipment. Contact me or Jon if you need more information. I talked to Grady McCorquodale about the equipment.

As I mentioned at the meeting, contact me if you have information that would be of interest to others. Also, contact me if you need to discuss something one on one or if you think we should discuss something as a group.

Malcolm C. Glenn
